The SI Clevis Swivel improves the overhead safety as the hanging position for the SI Top Rigging Sheave can never be caught in a bind. The SI Clevis Swivel flexes bidirectional and rotates 360°.

MANUFACTURING REQUIREMENTS

- Machined under strict ISO 9001 standards
- Custom ground thread and Go/No Go Gauges
- 100% inspection required
- All material certification, inspection data, and Conformance Certifications are kept on file for 5 years
- Synergy Industries promotes 100% serialized component traceability

SI Hand Guards are an improvement to safety on location. If elected, SI Hand Guards can be installed on the SI 14" & 18" Top Rigging Sheave. The shield arms are set so that the taut wireline is centered in the hand shield ring and locked securely in position. The split plastic shells close around the wireline and twist-lock into the hand shield rings. These shields are sturdy, providing maximum protection. All details are universal to the left-hand and right-hand shields.
