

## REEL FRAME

Synergy builds reel frames from steel I-beam, gusseted at all key points and dip galvanized to prevent oxidation. A full radius drip-pan is installed to allow for proper containment and draining of the line oil during operations.

## HYDRAULIC TANK

Synergy mounts the hydraulic tank directly to the truck chassis rails.

The Synergy tank placement limits movement ensuring a secure mount and properly distributing the total weight.

## THE WORLD'S FINEST WIRELINE TRUCKS

## BASE FRAME

Synergy's base frame is heavy gauge, 7.00" 100% welded channel throughout the base framework which extends the full width of the truck body.

## BODY MOUNTS

Synergy's body mount is 0.75" aluminum bar welded, gusseted top and bottom. The body mount bolts to the chassis using 0.50" grade 8 bolts.

# BATTERY BOX

Synergy installs battery kill switches and a safety fuse block as standard components on all truck units.

Synergy's battery compartment space allows for proper battery cable routing, ease of troubleshooting or replacement.

# STEPS & HANDRAILS

Synergy builds our steps in-house with grip plate extrusion. Although strong, they are light weight and easy to extend or retract. Two LED spotlights and reflective tape on the steps are standard for safety while entering and exiting the logging cabin.

Synergy has developed an enlarged handrail to provide a solid anchor-point for entering and exiting the logging cabin. All handrails are of electro-polished, stainless steel construction and standard on all Synergy trucks.

# STORAGE & TOOL RACKS

## UPPER BODY TOOL RACKS

Synergy's tool rack system has four levels of tool storage.

The full airbag system with securing chains provide maximum shock isolation during transport.

## BUMPER SAFETY & STORAGE

Synergy unit bumpers have full storage throughout its width.

The step is wide, tow pin and Synergy fold-down steps are all standard.

The Synergy fold-down step is ergonomically designed for safe entry.

## REAR STORAGE

Synergy maximizes storage utilizing 360 lb. capacity heavy duty slides.

Slide plates are powder coated and standard on all rear storage boxes.

## BATTERY BOX

Synergy installs battery kill switches and a safety fuse block as standard components on all truck units.

Synergy's battery compartment space allows for proper battery cable routing, ease of troubleshooting or replacement.

Synergy builds our steps in-house with grip plate extrusion. Although strong, they are light weight and easy to extend or retract. Two LED spotlights and reflective tape on the steps are standard for safety while entering and exiting the logging cabin.

# CABIN AREA

## SHEAVE WINDOW

Synergy incorporated a window above the hoist console to give the operator a view of the top sheave during wireline operations. This added safety feature allows the operator to view the top sheave without leaving the hoist console during any wireline operation to view the rig up of equipment.

# IT'S ALL IN THE DETAILS

## INTERIOR DETAILS

Synergy rivets the wall skins every 4.00" to ensure a long cabin life and secure fit.

Synergy utilizes exterior LED lighting standard on all trucks in accordance with in-country rules and regulations.

# EXTERIOR DETAILS

## POWER ENCLOSURE

Synergy electricians meticulously position and label every wire in the power enclosure. This aids in training, troubleshooting and unit performance.

## OPERATOR CONSOLE

Synergy's operator console is ergonomically designed for comfort during extended wireline operations. The operator console is laid out according to each customer's specifications.

## CABINETRY

Synergy fabricates all cabinetry in-house using 1/8" aluminum with large radius corners. Customized interior cabinetry layout is designated by each customer's needs. All cabinetry is powder coated for longer wear life in customer selected colors. Corian counter tops are standard.

## INTERIOR LIGHTING

Synergy's lighting is all LED and flush mounted. There is also indirect lighting options to provide ease of viewing.

## INTERIOR TRIM

Synergy installs aluminum trim throughout the interior to provide a complete seal. Positive air pressure is an available option for cabin interiors during transport.
